Adult ASM late response

GSE94335: 13 paired donors, known overlap removed
GSE130715: six adults, full set 45/54 supported
PER2/PER3 lower at measured late endpoints

Clock-related transcription

BMAL1/NPAS2 higher; NR1D2/DBP/TEF lower
LINC00607 newly measurable in GSE130715
Single endpoint: phase/amplitude not estimated

Early response and drug x time

4h / 8h ASM PER2: not confirmed after correction
Adult pulse 24h drug contrast: published P=.7831
No individual Ct for a new time x drug estimate

GR evidence

A549 short-exposure pharmacological interactions
U2OS rescue variants: PER2 not confirmed
PER1 control does not replace candidate causality

Human protein

METTL7A: complete original LFQ arrays acquired
7 raw labels / 6 published; 72h subset supported
24h subset and exact corrections not confirmed

Candidate function

No adult ASM candidate contraction / Ca2+ endpoint
GNAS, GR cAMP and fetal clock studies are distinct
No functional or clinical causal claim
