Adult ASM late transcription

Full 54-gene set: 45/54 combined support
PER2/PER3 lower; six adults in GSE130715
Small-n exact full family not confirmed

Clock-related transcription

BMAL1/NPAS2 up; NR1D2/DBP/TEF down
LINC00607 measurable in new source
No phase, amplitude or contraction estimate

Early response / drug x time

Early adult ASM PER2 not confirmed
Adult pulse 24h drug P=.7831 (published)
A549 / HASM1 conditions are distinct

GR genetic evidence

U2OS rescue PER2 interaction not confirmed
PER1 control does not establish PER2 causality
No empty-KO arm; GNAS is a different target

Human intracellular protein

HTPC METTL7A: complete raw LFQ acquired
72h published subset passes; 24h does not
Raw label / MaxQuant version conflicts retained

HTPC extracellular candidates

ANGPTL2 / FSTL3 identified, pairs insufficient
FBN2 72h raw Holm=.0127; subset=.270
24h stored / published processing unresolved

ASM EV material gap

PXD055968: six patients, 18 repeated runs
No controlled GC; final joint matrix missing
Identity check not started; request unsent

Other public GC proteomes

HBEC: balanced T2 / ICS paired design
Clinical epithelium, not controlled ASM GC
A549 / dermal secretome cannot replace ASM
